Projects With a VR Company.

VitaSim offers software solutions for the creation and digitalization of pratical skill training scenarios in Virtual Reality(VR). We work in the edtech sector with a broad focus on practical skills in many markets. However we have mainly build solutions for the medical sector for the training of medical skills.

Read more about our solutions at: Vitasim.dk

We have Project oppertunies in the following areas:

- **Software development in unity 3D and C#.**
  We develop the main part of our software solutions in Unity and write code in C#. We have both small and big projects that offer plenty of opportunities for you to work on code that will provide value.

- **Databases and backend.**
  Our VR application is hooked up to a GCP cloud solution and runs on both cloud storage and database resources. You will have the opportunity to work with both Infrastructure, security, architecture, CI/CD, and testing.

- **Front-end and web CMS development (ASP.NET).**
  Our main VR application is hooked up on a web-based CMS system for the management of the VR learning resources. This solution is still new, and there is plenty for you to do if you want to form our CMS solution.
